## Package utility

# Class ArrayList<E>

java.lang.Object utility.ArrayList<E>

All Implemented Interfaces:

List<E>

public class ArrayList<E>
extends java.lang.Object
implements List<E>

## Field Summary

### **Fields**

Modifier and Type	Field	Description
static int	DEFAULT_CAPACITY	

# **Constructor Summary**

## Constructors

Constructor	Description
ArrayList()	creates array list object
<pre>ArrayList(int capacity)</pre>	creates array list object for a specific capacity

# **Method Summary**

All Methods	Instance Methods	Concrete Methods
Modifier and Typ	e Method	Description
void	<pre>add(int index, E item)</pre>	inserts the item at the given index in the list.
boolean	<pre>add(E item)</pre>	appends the item specified to the end of the list.
void	<pre>clear()</pre>	clears list of all elements, return size back to zero.
boolean	<pre>contains (E item)</pre>	searches for an item and returns true if in the array,

Modifier and Type	Method	Description
void	<pre>ensureCapacity (int capacity)</pre>	
Е	<pre>get(int index)</pre>	returns the item at the specified position in the list.
int	<pre>indexOf (E item)</pre>	searches for an item and returns the first occurrence in the array, otherwise returns -1, if NOT found.
boolean	<pre>isEmpty()</pre>	returns true, if the list is empty,
Iterator <e></e>	<pre>iterator()</pre>	returns an object used to traverse the elements in list
Е	<pre>remove (int index)</pre>	removes the item at the given index in the list.
boolean	<pre>remove(E item)</pre>	removes the first occurrence of the specified item from the list, if present.
Е	<pre>set(int index, E item)</pre>	replaces the item at the specified position with the one passed.
int	size()	returns the number of the elements in the list.
java.lang.String	toString()	displays the contents of the list.

## Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, wait, wait, wait

## Field Details

## **DEFAULT\_CAPACITY**

public static final int DEFAULT\_CAPACITY

**Constant Field Values** 

## **Constructor Details**

## **ArrayList**

public ArrayList()

creates array list object

## **ArrayList**

```
public ArrayList(int capacity)
```

creates array list object for a specific capacity

#### Parameters:

capacity - of the maximum list.

### **Method Details**

#### size

```
public int size()
```

returns the number of the elements in the list.

### Specified by:

size in interface List<E>

#### Returns:

size of the list.

### add

```
public boolean add(E item)
```

appends the item specified to the end of the list.

### Specified by:

add in interface List<E>

#### Parameters:

item - in the list

#### Returns:

boolean value if successful.

#### add

inserts the item at the given index in the list.

```
Specified by:
```

add in interface List<E>

#### Parameters:

index - given in the list.

item - in the list.

#### clear

```
public void clear()
```

clears list of all elements, return size back to zero.

### Specified by:

clear in interface List<E>

### get

```
public E get(int index)
```

returns the item at the specified position in the list.

### Specified by:

get in interface List<E>

#### Parameters:

index - of item in list.

### Returns:

item at index.

#### remove

```
public E remove(int index)
```

removes the item at the given index in the list.

#### Specified by:

remove in interface List<E>

#### Parameters:

index - of item in list.

#### Returns:

old value in list.

#### remove

```
public boolean remove(E item)
```

removes the first occurrence of the specified item from the list, if present.

#### Specified by:

remove in interface List<E>

#### Parameters:

item - to remove from list.

#### Returns:

boolean value.

#### set

replaces the item at the specified position with the one passed.

#### Specified by:

set in interface List<E>

#### Parameters:

index - to replace list item.

item - that replaces one in list.

#### Returns:

old item.

#### indexOf

```
public int indexOf(E item)
```

searches for an item and returns the first occurrence in the array, otherwise returns -1, if NOT found.

#### Specified by:

indexOf in interface List<E>

#### Parameters:

item - to search for in list.

### Returns:

location of item, if found.

### **isEmpty**

```
public boolean isEmpty()
```

returns true, if the list is empty,

Specified by:

isEmpty in interface List<E>

Returns:

boolean value

#### iterator

```
public Iterator<E> iterator()
```

returns an object used to traverse the elements in list

Specified by:

iterator in interface List<E>

Returns:

iterator for list

#### contains

public boolean contains(E item)

searches for an item and returns true if in the array,

Specified by:

contains in interface List<E>

Parameters:

item - to search for in list.

Returns:

boolean value.

## ensureCapacity

public void ensureCapacity(int capacity)

doubles the capacity of the underlying array, to ensure that it can hold the number of elements specified by the capacity requested.

Parameters:

capacity -

### toString

public java.lang.String toString()

displays the contents of the list.

-/-	Allayest
	Overrides:
	toString in class java.lang.Object
	Returns:
	list
